Large scale growth requires large scale thinking. When sisters Rae Lindsay and Angela Pettigrew launched their gourmet cookie company, Mom's Best, neither predicted they'd soon become one of Canada's largest biscotti manufacturers. Now they export around the world to the USA, Mexico, Asia and the Middle East. As their company grew, so did their relationship with TD Commercial Banking Account Manager, Carol Speirs. Carol's in-depth knowledge brought customized banking, like flexible financing solutions, that always kept them ahead of their rapid expansion. When a TD representative is working with you, we'd like to think it's a recipe for success. To find a representative in your area, visit tdcommercialbanking.com/representative

An easier choice

There are many ways in which packaging impacts consumer decision making when it comes to purchasing food and beverage products.

Marketing-related packaging choices that aim to drive demand still sway customers, but big-picture issues are increasingly having an impact. Questions such as environmental friendliness and sustainability — in terms of the type or amount of packaging, or its recyclability are quickly becoming significant influencers in mainstream food and beverage purchases. And it is now essential that producers demonstrate to consumers that their food and beverage packaging is made of safe materials, that it successfully maintains the safety and shelf life of the product it contains, and that it is tamperproof.

But when it comes to hot-button issues in packaging, there has been little discussion about food and beverage containers that are made specifically with ease of opening in mind. It may be a minor issue compared to food safety or sustainability, but for a substantial portion of the community with limited dexterity and/or strength, as well as North America's burgeoning population of seniors, hard to open packaging is not only frustrating, it can be potentially dangerous.

A study published in August by U.K. consumer advocacy group Which? revealed that four in 10 people of the more than 2,000 consumers surveyed said they have hurt themselves while trying to open a package in the past two years. Another one-quarter of those surveyed said they regularly need assistance opening packaging. While moulded plastic clamshell type packaging was

described as the most frustrating, tin cans were fingered as the most injury inducing. Other common difficult-toopen packaging included shrink wrap and peel-off coverings.

Also cited as a source of frustration was the lack of clear, easy-to-read opening instructions on many packages. That may be why the survey found that respondents regularly resort to scissors (89 per cent), knives (66 per cent), screwdrivers (six per cent), razor blades (four per cent) and even hammers (two per cent) to get at products.

While this study did not specifically look at food and beverage packaging, a similar report published in January, this one by U.K.-based packaging specialist Payne, found that 85 per cent of those surveyed had had difficulty opening packaging in the past year. Of these, 49 per cent specifically cited food and beverage packs. Clamshells were again found to be the most frustrating, followed by cardboard boxes, bags/ packets, trays with lids, envelopes, shrink wrapping, plastic bottles, aseptic packs/ cartons, boxes with ties, and roll wrap.

Accessibility in packaging may not overshadow priority considerations such as sustainability or safety, but it is now a real purchasing influencer for many consumers. It can also be a significant point of differentiation for products in our highly competitive retail environment. After all, no matter how healthy, safe and delicious your product is, if consumers can't open it, they just won't buy it.

CCooper@foodincanada.com

"Our products may be healthier, but our margins aren't."

People who know Food & Beverage, know BDO.

The Consumer Business Practice at BDO

Food processors throughout Canada face an increasingly challenging business environment: changing consumer demands, ever-stricter regulations, and new competitors in a sector that's already over capacity. BDO's professionals offer significant industry-specific experience, providing an exceptional range of partner-led services to help you grow your business – no matter what the market conditions.

Assurance | Accounting | Tax | Advisory www.bdo.ca/consumer-business

From Godzilla to Avozilla

The world's largest avocados, known as Avozillas, hit grocery stores in the U.K. in August. Avozillas are double the length and five times bigger than regular avocados and weigh an average of three pounds. Avozillas come from just four trees in South Africa. There's no word yet on if the green giant will ever make it to Canada.

Award-winning Manitoba food processor raided

Food processing entrepreneurs Clint and Pamela Cavers may have won the Great Manitoba Food Fight last May in Brandon — but the fight they're in now poses a much greater challenge.

The irony is that the same provincial government department that awarded the Cavers the \$10,000 for their new pastured pork prosciutto, Manitoba Agriculture, Food and Rural Initiatives (MAFRI), now wants to put them out of business, at least as far as the prosciutto is concerned. According to the government, the prosciutto is either "not fit for human consumption" or lacks "the appropriate permits certifying that it is safe to eat."

The Cavers operate Harborside Farms

in southwestern Manitoba. Five years ago, they began developing the cured meat product — a process known as charcuturie — using traditional Italian recipes. They then began selling their product to several high-end Winnipeg restaurants. "The Minister of Agriculture himself tasted our product at the Great Manitoba Food Fight and approved," says Clint Cavers. "We had inspectors here three times over the summer and we tried to comply with all their requests. Then, in late August, the inspectors out of the blue came in and shut us down."

To make matters worse, the raid came during a visit to the processing facility by a group of university environmental students. The inspector demanded to see the students' identification, and ordered them to destroy any photos they may have taken. The inspectors seized all of the Cavers' cured meat, roughly 160 kg worth about \$8,000. The meat was scheduled to be destroyed in early September. "We are not sure where this is going," Cavers says. "MAFRI wrote us about their concerns about Listeria, E. coli, Staphylococcus and Salmonella. We asked for our product to be tested, but they refused to let us do the tests."

MAFRI spokesperson Glen Duizer declined to go into specifics concerning the Cavers' case. He did say that the department works closely with small-scale producers to help them attain best management practices and ensure food safety.

Dave Shambrock, executive director of the Manitoba Food Processors Association, comments that the Cavers case is a complicated situation. "Not all the facts

and data have been made public," he says. "There are underlying issues. Small companies, especially producers doing their own processing, are in the forefront of innovation in the industry. It is a challenge for them developing the product and marketing skills and keeping abreast of all the sometimes overlapping health regulations. There are a lot of regulations in place across Canada that need to be updated to reflect current conditions in the industry. The Cavers have been caught up in a big picture problem." pg.10 🕕

EU APPROVES CHOCOLATE HEALTH CLAIM

The European Union Commission has approved Switzerland-based Barry Callebaut's health claim submission on cocoa flavanols. Barry Callebaut can now use the health claim that "cocoa flavanols help maintain the elasticity of blood vessels, which contributes to normal blood flow " — the first in the cocoa and chocolate industry.

The company says it was able to provide evidence that the daily intake of 200 mg of cocoa flavanols (provided by 2.5 g of its ACTICOA cocoa powder or 10 g of its ACTICOA dark chocolate) supports healthy blood circulation.

The Chemical Company

from pg.8

Supporters of the Cavers have started a petition online which has attracted more than 500 signatories. Meanwhile, the pair are working with a different set of MAFRI staff members who are helping them achieve the specific set of good management practices they need to restart their prosciutto production. But they still don't know why their product was seized and destroyed and neither, it seems, do the MAFRI staff who are working with them.

Mission Hill tops National Wine Awards

Last month, WineAlign announced the winners of the National Wine Awards of Canada.

The wines were judged in June in Ontario's Niagara region. In all, 16 independent wine critics gathered for five days to sample 1,081 wines grown and produced by more than 150 wineries across Canada and released for sale in 2013. The wines were tasted blind, with the top scoring 22 per cent of the entries going on to a final round for a second evaluation.

The awards are held annually in June and are only open to wines grown and produced in Canada. The aim of the competition is to expose Canadian wine drinkers to the best wines available in Canada. There is no restriction on price.

The judges named West Kelowna, B.C.-based Mission Hill Family Estate Winery the Winery of the Year based on its haul of two platinum, three gold, three silver and four bronze medals. For a list of all categories and winners, visit www.winealign.com/awards

Salmonella, from farm to fork

Researchers at Pennsylvania State University's College of Agricultural Sciences say they have developed a tool that can help identify and track strains of antibiotic resistant bacteria as they evolve and spread.

The scientists say that tracing the transmission of individual strains from agricultural environments to humans through the food system is difficult because of the rapid evolution of resistance patterns in these bacteria. Resistance patterns change so quickly that, until now, it has been impossible to determine where some highly resistant strains are coming from.

Researchers developed the new approach to identify antibiotic resistant strains of Salmonella Typhimurium by focusing on virulence genes and new regions of the

bacteria's DNA. These new regions are present in many foodborne pathogens, and can be used to iden-

tify populations of Salmonella with common antibiotic-resistance FROM OUR

From Little, Brown and Company comes the new title, Eating on the Wild Side: The missing link to optimum health by Jo Robinson. Blending science and history, Robinson details the nutritional history of fruits and vegetables, beginning with the wild plants that were central to our ancestors' original diet. She goes on to describe how 400 generations of farmers have unwittingly squandered many of the essential nutrients in these foods, meaning that the fruits and vegetables we eat today contain only a fraction of the fibre, protein,

vitamins, minerals and antioxidants found in wild plants. So how do consumers recoup the nutrients? Robinson shares how we can all eat on the wild side.

patterns in both animals and humans.

"Our challenge now is to learn what makes those strains

> different — why do some strains acquire resistance while others don't, even though both are circulating widely among animal populations?" says Michael DiMarzio, a doctoral candidate in

food science. "We will need to know that to try to

control them."

Ock-star lettuce

Six plants are sure to become out-of-this-world famous this winter. NASA is sending six romaine lettuce plants to the International Space Station in December. They'll be travelling in Kevlar pillow-packs, which will function as planters, and will be grown under bright pink LED lights, reports ModernFarmer.com. The burgundy-colour lettuce (the Outredgeous strain) should be ready to harvest after 28 days.

The experiment is part of the Vegetable Production System (VEG-GIE) program, focusing on growing fresh produce that astronauts can eat on longer space missions. Growing plants in space is not new for NASA, but the goals of previous experiments have been mainly academic, reports ModernFarmer.com. VEGGIE's experiments focus on ways to sustain astronauts and space travellers with fresh foods. The other focus is to help cut food costs. ModernFarmer.com reports that currently it costs US\$10,000/lb. to send food to the ISS. The Outredgeous lettuce is a first-phase vegetable, which is quick to grow and packed with antioxidants. Later veggies could include radishes, snap peas and a special strain of tomato that is designed to take up minimal space.

Our Tech Team has made some major strides in hygiene technology.

Get all the specifics at Process Expo, along with our new advancements in freezing, portioning, scanning, coating, cooking, frying and filtration.

To exceed your food safety requirements, look no further than the GYRoCOMPACT® M10 TC Spiral Freezer. Built as a hygiene-by-design freezing solution, the GC M10 TC provides high capacities with long run times, a small footprint and short turnaround times. The GC M10 TC comes fully loaded with hygiene upgrades, including a fully seam welded enclosure, a hygienic coil design, a self stacking stainless steel belt and an internal Clean in Place (CIP) system, which automates the entire hygiene cycle.

Our upgrades in freezer hygiene speak for themselves. To get the full picture, see how our entire portfolio is designed with you in mind.

Looking toward 2014

The NSF-Guelph Food Technology Centre (NSF-GFTC) is holding its annual State of the Industry symposium on Nov. 7, 2013 in Toronto. The event

features an expert line up of speakers who will weigh in on the economy, succession planning and the retail sector. This year's keynote speaker will be Amanda Lang, CBC reporter and author of the Power of Why. Her presentation will focus on how questions and curiosity can fuel innovation and change your business.

Other speakers will include Douglas Porter, chief economist with BMO Capital Markets; Grant Robinson, director of the BDO SuccessCare Program; Dr. Jean-Charles Le Vallée, senior research associate at the Centre for

Pop Art

Andy Warhol has earned himself another 15 minutes of fame. To commemorate Perrier Sparkling Water's 150th anniversary, Nestlé Waters Canada is paying tribute to the late Warhol with a series of limited-edition bottles. In 1983, Warhol created more than 40 works featuring the Perrier bottles in a vibrant colour palette that has been replicated on specially designed Perrier bottles available across Canada. The Perrier screen prints represent the Pop Art movement and Warhol's fascination with depicting everyday consumer products in unconventional ways.

Food in Canada; and Carman Allison, director of Consumer Insights at Nielsen. The agenda topics include global challenges and outlook, demographics, Canada's innovation performance and consumer behaviours and trends.

Visit www.gftc.ca for more information.

Quirky flavours

You gotta love food science — particularly the food science in Asia.

In Japan, for instance, Coca-Cola will launch Canada Dry Hot Ginger Ale this month, the first time that heat has

successfully been combined with bubbles in a ready-to-drink beverage, reports the Telegraph.co.uk. Other reports say it took Coca-Cola four years to perfect the technology.

On the snack side, also in Japan, Frito-Lay and PepsiCo have partnered to create Pepsi-flavoured Cheetos, which hit store shelves this past summer. The news was reported in several media outlets and sites, but very few could say they actually tried them. One lucky staff member at the blog TheImpulsiveBuy. com did try them, and reported that they had "a very acidic bite...very citrusy, almost sour" taste.

As it turns out, the mash-up between PepsiCo and Frito-Lay isn't new. The two brands partnered in 2012 to create Pepsi Chicken Chips for the Chinese market. Advertising Age.com reported at the time that Lay's launches a new flavour each year, and that year wanted to address food fusion. In China, it's common to cook chicken with cola, so it was a no-brainer, and the flavour turned out to be one of the company's biggest hits. And in case you needed more proof that it was a match made in food heaven, AdvertisingAge.com reported that if you put together Pepsi's and Lay's Chinese brand names, a double meaning was created: "Anything can be happy" and "Pepsi can become Lay's."

FCC opens new office

Farm Credit Canada (FCC), an agriculture lender, opened a new satellite office in New Liskeard, Ont. last month. The office will serve customers from Northern Ontario and the Abitibi-Témiscamingue region in Quebec. The New Liskeard office has a five-year lease on the 2,467-sq.-ft. office space, and will be open by appointment only.

Food waste harms natural resources, biodiversity claims report

Every year the food the world produces — but doesn't consume — uses up a volume of water that is equivalent to the annual flow of Russia's Volga River. It's also responsible for adding 3.3 billion tonnes of greenhouse gases to the planet's atmosphere.

Those are just two of the findings of a new report called Food Wastage Footprint: Impacts on Natural Resources from the Food and Agriculture Organization of the United Nations (FAO).

The FAO says its report is the first study to analyze the impacts of global food wastage from an environmental perspective. The report specifically looked at the consequences of food waste on climate,

Happy birthday, baby!

Nestlé Gerber is celebrating its 85th birthday by introducing a new Arrowroot Biscuit this month. The biscuits have no artificial flavours, colours or sweeteners. and were created with little hands in mind. The biscuit's dimensions,

circular design and finger-size hole allow for a multitude of grasps. The biscuits will retail for \$2.99 a bag.

water and land use, and biodiversity.

Beyond the environmental impacts, says the report, the direct economic consequences to producers of food wastage (excluding fish and seafood) are an estimated US\$750 billion annually.

Where wastage happens

The report found that:

- 54 per cent of the world's food wastage occurs "upstream" during production, post-harvest handling and storage.
- 46 per cent of it happens "downstream," at the processing, distribution and consumption stages.
- Food waste at the retail and consumer level tends to be higher in middle- and high-income regions — where it accounts for 31 per cent to 39 per cent of total wastage — than in low-income regions, where it is four to 16 per cent.

Hot spots

Several world food wastage "hot-spots" stood out in the study. In Asia, the waste of cereals has major impacts on carbon emissions and water and land use. Rice's profile is particularly noticeable, given its high methane emissions combined with a large level of wastage.

Globally, meat wastage volumes are comparatively low. But the meat sector generates a substantial impact on the environment in terms of land occupation and carbon footprint. This is especially true in high-income countries and Latin America, which in combination account for 80 per cent of all meat wastage. Excluding Latin America, high-income regions are responsible for about 67 per cent of all meat wastage.

Fruit wastage contributes significantly to water waste in Asia, Latin America, and Europe. Similarly, large volumes of vegetable wastage in industrialized Asia, Europe, and South and South East Asia translate into a large carbon footprint for

For more on the report, visit: www.fao.org.

GET RECESSION-FIGHTING SAVINGS WITH CLAYTON STEAM BOILERS

Worldwide Energy Savings: \$134-Million!

You can save a bundle in energy costs and gain production-boosting performance, too. How? With Clayton steam boilers, noted worldwide for keeping fuel consumption low and reducing greenhouse gas emissions (In just one year, for example, plants around the globe that used Clayton steam boilers saved \$134-million in fuel costs.)

Other benefits: unique counterflow technology for better efficiency, small footprint, low NOx emissions, quick start-ups, even pressure when demand fluctuates and great performance on numerous fuels or combinations.

Clayton steam boilers. Benefiting budgets for 80 years.

> Colio Estates Winery of Ontario has become the first to harvest Pinot Noir grapes in the Lake Erie North Shore region of the province.

> The Italian brand **Martini** is celebrating its 150th anniversary. **Bacardi Ltd.** is marking the occasion with retail exclusives, commemorative labels and new collaborations. Also

> A campaign is on to promote foods and farmed products in the **North Cariboo** of B.C. The campaign, called North Cariboo Farm Country — Grown for You, includes promotion of North Cariboo-grown products and farm-based services such as signs and banners, product packaging, in-store promotional materials and an upgraded website

> Illinois-based Blommer Chocolate Company, the largest cocoa processor and ingredient chocolate supplier in North America, is the first cocoa producer to offer 100-per-cent Roundtable on Sustainable Palm Oil (RSPO), mass balance palm oil in the U.S.

celebrating a milestone is the cocktail **Cuba Libre**, which turns 113.

- > Saskatchewan-based **Ag-West Bio Inc.** is using a recent investment from the federal government to boost its commercialization and marketing efforts. Saskatchewan-based Ag-West Bio helps early stage companies to commercialize and market their products.
- > New Brunswick-based **Gray Aqua Group** has filed for bankruptcy, owing creditors almost \$40 million. Reports say the company dealt with three separate cases of infectious salmon anemia (ISA) over the past year and a half. Resulting culls, ordered by the Canadian Food Inspection Agency, led to the loss of more than a million fish.
- > Rich Products Corporation celebrated the 50th anniversary of its plant in Fort Erie, Ont. last month. Rich's Canada launched in 1963 and now includes a sales and marketing office, a second plant in Woodbridge, Ont., and 365 employees. Rich Products produces non-dairy frozen foods.
- > Vancouver-based AgriMarine Industries
 Inc. has acquired West Coast Fishculture
 (Lois Lake) Ltd. and West Coast
 Fishculture Ltd. (jointly referred to as
 WCFC). WCFC is a privately held steelhead
 trout farm operation. AgriMarine develops
 a proprietary solid-wall containment aquaculture technology for sustainable salmon farming in a controlled culture water environment.

GOT BREAD?

BACARDI

中

It seems that in France consumers aren't eating bread like they used to. The average French person consumes just half a baguette a day, which is down from a full baguette 40 years ago, reports NPR.org. It's worrisome enough that the French bakers' lobby has weighed in with a campaign that is similar to the Got Milk? one in the U.S. In French, the group's new slogan is "Cou cou, tu as pris le pain?" which translated is "Hi there, did you pick up the bread?" NPR.org says the slogan has popped up on billboards and has been printed on bread bags in 130 cities around the country. The French, especially Parisians, still pick up their bread at neighbourhood bakeries. In fact, France has the highest density of independent bakeries in the world - 32,000 and the French do consume around 10 billion baguettes a year. The lobby's campaign website lists bread as part of French civilization and "a staple of health and conviviality." Atkins diet - quoi?

Imagine the possibilities. We do—every day. That's why David Michael has established a strong reputation for innovation that continues to set us apart from the competition, making us the perfect partner for your next groundbreaking idea.

- > New Jersey-based Camp-

bell Soup has appointed Ed Carolan as president of the U.S. Retail division. In addition, Tim Hassett is now senior vice-president and general manager, Away from Home, and chief Customer Service officer of Campbell North America. The company also promoted Darren Serrao to senior vice-president of Innovation and New Business Development.

- > New York-based Hain Celestial Group Inc.. an organic and natural products company, has appointed Stephen Smith as executive vice-president and CFO.
- > Teri List-Stoll has joined Illinois-based Kraft Foods Group as senior vice-president of Finance.
- > Illinois-based Mondelez International has announced the retirement of Pradeep Pant. executive vice-president and president, Asia

Pacific and Eastern Europe, Middle East & Africa. Timothy Cofer, who is currently executive vice-president and president, Europe, will replace Pant. Hubert Weber,

president, Coffee, Europe, and leader of the

company's Global Coffee Category Team, will succeed Cofer.

- > Michigan-based Kalsec has promoted **Dr**. Scott Nykaza to president and COO.
- > Wisconsin-based Sensient Technologies

Corporation has appointed Paul Manning to president and CEO.

> Bunting Magnetics Co. of Kansas has hired Sultan Shaaban as design engineer

for Separation Equipment; Isaac Castro as design engineer for Material Handling Equipment; Eric Johnson as design engineer for Material Handling Equipment; and Mark McGovern as inside sales representative for Separation Equipment.

- > North Carolina-based Chiquita Brands International has appointed Courtney Parker as vice-president of Food Safety and Quality. > Ingredion has appointed Ricardo de Abreu Souza to senior vice-president and president, South America Ingredient Solutions, in its offices in Mexico.
- > Ian Bessell has joined Colorado-based Birko, a provider of food safety solutions for the produce industry, as director of Business Development and Food Safety for Produce.
- > The Grocery Manufacturers Association has appointed Mandy Hagan as its new vicepresident of State Affairs and Grassroots.

VIDEO GAMES AND VEGGIES

Convincing children to try different vegetables is a challenge — let alone getting them to eat their veggies on a regular basis. But in Japan, a PhD student has invented a way to get children to eat up roughage and it might be a sure-fire hit.

Wired.com reports that last month at the Tokyo Game Show, Takayuki Kosaka unveiled his Food Practice Shooter, or FPS. The game is described as a "Serious Dietary Education System for Changing Food Preferences." Essentially it's a game designed to teach kids to enjoy eating vegetables.

The idea is fairly simple, explains Joystiq.com: In order to obtain more ammunition in-game, players must eat healthy foods in real life. The game system comes with three high-sensitivity scales that measure the weight of three cups of vegetables.

When prompted by the game, the player removes some from the required cup. Then, a head-mounted sensor measures the movement of the players' cheek, telling the game whether they've eaten their veggies. Convoluted? Yes. Effective? Maybe.

Sourcing, manufacturing and offering innovative ingredient solutions and finished product application concepts to our customers.

Ingredients For your Success!

Our dedicated sales professionals understand our customers' business. By combining science, creativity and innovation, from ingredient development through final application, we create value for our customers and help them grow their business. From order to delivery, our outstanding team brings skill, experience and knowledge to ensure service excellence.

Beets, bread and better heart health

A study out of the University of Reading in the U.K. has found that bread baked with beetroot can help lower consumers' risk of heart disease.

The researchers say that eating four slices of bread containing beetroot has the effect of lowering blood pressure

and improving the function of blood vessels, which can significantly improve heart health.

The component that is thought to be responsible for the beneficial effects on blood vessel function and blood pressure is dietary nitrate, a natural component of beetroot and a number of other vegetables such as spinach, lettuce and rocket (arugula).

The researchers say that when dietary nitrate is eaten it produces nitric oxide in the blood vessel wall, which causes relaxation of the vessel and increased blood flow. This ultimately results in lowering of blood pressure and an improvement in blood vessel function.

"These exciting and novel findings show for the first time that bread containing beetroot improves blood vessel function. This is an important addition to the increasing body of evidence that suggests beneficial effects of dietary nitrate-rich foods on the heart," says Julie Lovegrove, professor of Human Nutrition, head of the Hugh Sinclair Unit of Human Nutrition and the deputy director of the Institute for Cardiovascular and Metabolic Research (ICMR) at the University of Reading.

"This research also supports the findings of our previous study which was carried out last year and showed that beetroot in the form of juice or bread lowers blood pressure. Collectively, these studies suggest a potential role for foods rich in dietary nitrate in the management of high blood pressure."

The researchers provided 24 participants with four slices (200 g) of bread containing 100 g of beetroot, or control bread with no beetroot enrichment, on two separate occasions. What they found was the diastolic blood pressure of those who consumed beetroot bread was lowered by up to seven mmHg

when compared to the control group, approximately three hours after consumption.

The researchers say the evidence they gathered suggests that a reduction in diastolic blood pressure of five to six mmHg over a five-year period could reduce the chances of a stroke by 38 per cent and coronary heart disease by 23 per cent less.

Louis Giguère

Defining moments for the "Big Three"

Emotions ran high in September as Loblaws, Sobeys and Metro rolled out highly strategic projects in their quest to thrive in Canada's new retail environment. An estimated 4.3 million sq. ft. of new retail space will come online this year.

The projects announced by the "Big Three" took more than a year to complete in terms of development, design and implementation, and have mobilized staff, working together in multidisciplinary task forces, to put in thousands of hours of work. All three crossed the finish line in the second week of September, with major announcements pertaining to these long leads. When senior managers put their money and efforts where their mouths are, you get a real sense of their organizations' commitment to deliver on this new positioning and commercial stance. Here is what those strategies look like:

Loblaws adds weight and nutritional guidance

At the end of August, Loblaws announced its acquisition of Shoppers Drug Mart — a \$12-billion transaction, the largest since China's state-owned energy giant CNOOC took over Calgary-based Nexen. Following that was the exclusive Canadian rollout (including Quebec) of the U.S. Guiding Stars nutritional program. The largest food retailer in Canada merged with the largest drugstore chain, resulting in an even larger retailer that will certainly benefit from economies of scale in many areas, notably purchasing.

Where consumers are concerned, not much will emanate from this new entity, besides the convenience of finding PC products at Shoppers Drug

Mart, and probably the added benefit of having better pharmacy departments in supermarkets. However, with their complementary offerings, the numbers will add up on the bottom line and give Loblaw Companies a weight that will command respect by intruders of any size and origin. In addition, the exclusive implementation of Guiding Stars, a U.S. turnkey nutrition guidance program that rates the nutritional quality of food using information from the Nutrition Facts Panel and the ingredients list — the first of its kind on this side of the border enhances the shopping experience and gives added value to consumers. Only time will tell how much this is worth.

Metro occupies cyberspace

Sobeys and Metro are hardly suffering in the wake of this new Canadian retail giant. Intent on focusing on another direction, and capitalizing on the success of its metro&me personalized rewards program (\$70 million worth of rewards have been given out over three years), Metro announced on Sept. 10 the launch of its new, state-of-the-art website. Within this new "ecosystem" users will be able to synchronize their grocery lists with the My Metro app, and by sharing their www.metro.ca account, all family members

will be able to share the list. Users who are also metro&me members can use their iPhone iMobile digital device as their metro&me card at checkout, and redeem their personalized coupons.

Metro is also capitalizing on years of effort spent working in transaction data mining with partner DunnHumby. Metro.ca, which provides more than 4,500 recipes and has already established itself as the most frequented food retailer website in Canada, with more than 700,000 single visitors per month (comScore Inc., June, 2013), has what it takes to lead the way into a new age of shopping. The retailer also now boasts 250,000 and 99,000 "likes" on its Facebook fan pages in Quebec and Ontario, respectively, making Metro the most popular grocery retailer on Facebook in Canada. With an offer that has all the potential to make it "the place to shop" for the 45-and-under crowd and a classic grocer approach to merchandising that also makes it appealing to the 55-andover set, Metro may very well succeed at pleasing two very different targets. With a very high level of promotional activity in the market, combined with consumers shopping around to find the best deals, offers made through advanced personal addressing can certainly build loyalty.

Sobeys plays the healthy indulgence card

For Sobeys, differentiation leads to another destination. After acquiring Safeway on Sept. 12, which bolstered its objective to become a strong coast-to-coast operator, the grocery chain unveiled the most thrilling initiative in years for food lovers: a partnership with international superstar chef Jamie Oliver, aimed at encouraging and helping Canadians explore the world of better-for-you and better tasting food. As Oliver puts it, "Together we want to show everyone that making tasty, nutritious meals from scratch can be simple, quick and affordable. By providing people with great-quality produce and super-useful tips and recipes, as well as arming them with essential cooking skills, our aim is to help people lead healthier, happier lives."

This approach is very much in tune with the new "canons" of eating better and healthier based on health and pleasure. Priorities include enjoying fresh and tasty foods, shopping for healthy and wholesome products, being free from artificial flavours and preservatives, and choosing sustainable products. Sobeys is now the first major retailer in North America to offer Certified Humane chicken, pork and beef, and, let's not forget that saving time is included in this approach. If strongly enforced, the release of this bold strategy, in co-operation with Chef Oliver, will hopefully serve up an original interpretation of a new health paradigm: eat full foods, no less!

Between now and the release of the first quarter financial results, we should see many new programs activated across all grocery platforms. The question is: "By how much will these activations offer differentiation, and will they help move the needle, considering that it will all occur in the most competitive environment ever seen in Canada?" For all of us in the industry, this is a very good reason to shop around.

MARKET OUTLOOK

The U.S. (and some other) crops are going to be large. Western Canada is going to have a banner year if the weather holds for another two or three weeks. But the extent of demand is not yet clear. For example, at press time a \$2.8-billion sale of soybeans was announced that flies somewhat in the face of forecasts that China would curtail its imports. Forward markets are much better at forecasting supply and their price implications than they are at forecasting demand.

At this stage it appears production will rise more than demand and, therefore, carryover will rise. If that is true, look for prices to continue to fall. Longer term, the market is anticipating more acres of grains and oilseeds next year, and many forecasters are convinced that the period of high grain prices is over. We'll see; weather is still important, as confirmed by the current drought in Argentina. So, the market is bearish enough that all soybean oil, corn and wheat are sitting on major support planes that, if penetrated, will likely take prices down several more notches. For the purchasing manager, what

prices do around those support planes will tell which way the market is likely to move over the next few weeks.

Sugar had a significant bounce and is testing resistance at \$0.18 on the March contract, though the chart continues to show an overall downtrend. The loss of production in Australia and the current neutral to bullish view of non-commercials may keep it rising, but there is nothing yet in the fundamentals that would suggest a rally much more than the 62-per-cent retracement at \$0.207.

The direction of oil prices in the next few months will depend on political events in Syria, Egypt and Israel – if they stay quiet, then expect oil to drop back below \$100. But if there is a further flare up, prices will go higher. The "experts" are expecting a lower loonie, and so am I — if oil and gold come down.

Market Trends is prepared by Dr. Larry Martin, who offers a course on managing risk with futures and options, Canadian Food and Agri-business Management Excellence (CFAME), a management training course for food industry personnel. Contact him at larry@agrifoodtraining.com or at (519) 841-1698.

MARKET HIGHLIGHTS

Both the grain and energy markets tumbled recently, grains on more bearish fundamentals and oil on the prospect of less conflict in Syria. Though not as disruptive as several recent times, the USDA's September report on grains and soybean oil was mildly surprising. As expected, it reduced the expected yield of U.S. soybeans, but by less than anticipated, while actually raising the expected yield of corn.

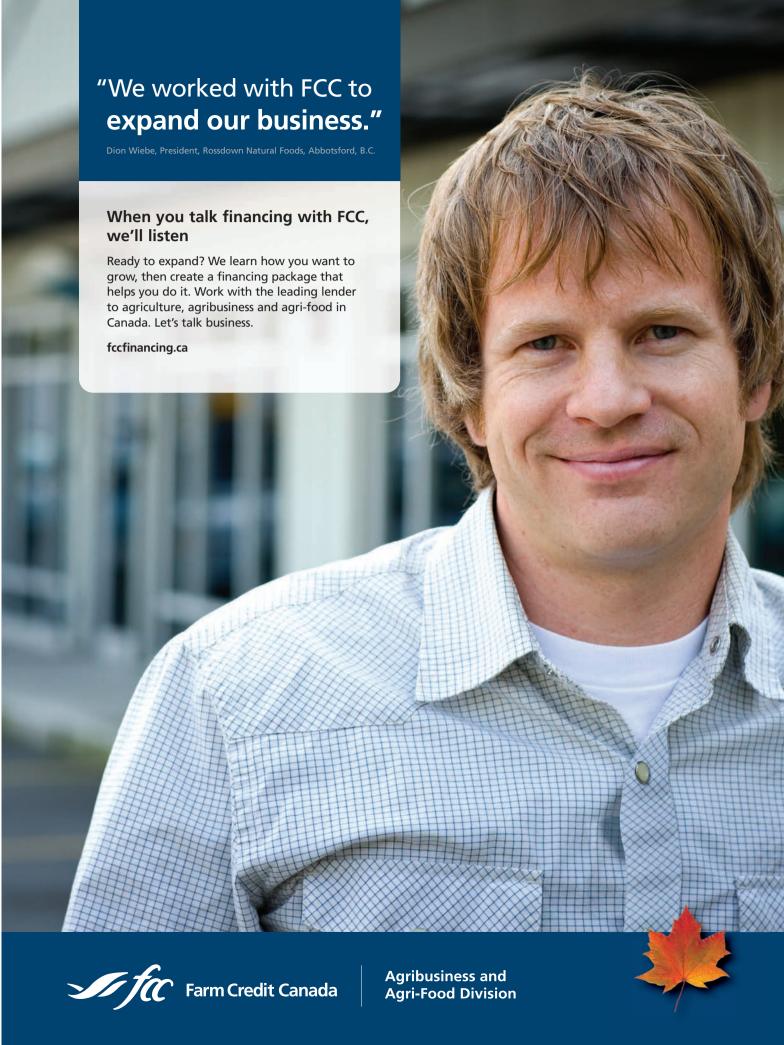

- > Corn Despite much concern about "flash drought" in the U.S. cornbelt, yield estimates were back to those of two months earlier. This was largely due to favourable early season weather, which increased the number of ears per plant. So while dry weather may reduce the size of ears, there will be more ears. The expected crop is 13.85 billion bushels. December futures had rallied from \$4.45 up past \$5, but the September report wiped out all of that gain, and at press time the market was testing the old lows. If support holds at \$4.45, place forward orders. If it breaks through, look for a lower entry point.
- > **Soy oil** While the USDA reduced the soybean yield, it was less than expected. Moreover, world oilseed and palm oil production are substantial. It appears

that there will be a buildup in stocks of oil. Not surprisingly, December soy oil moved back and is testing its old lows at \$0.4185 cents. As with corn, price here if those lows hold. However, if they have broken out by the time you are reading this, then look for a lower point of entry.

- > Wheat The USDA's wheat report was neutral, while the underlying fundamentals remain fairly bullish. Nevertheless the wheat market continues to follow the corn market. December futures on the Chicago contract are again testing their lows, and Minneapolis has already broken through to new lows. As with corn and soybean oil, buyers should see if the lows around \$6.43 hold. If not, look to enter lower.
- > Sugar Sugar futures declined and then rallied back to test the August highs (\$0.18 on the March contract). The most recent rally resulted from weather-reduced production in Australia, and reduced short positions of speculators. Buyers should protect against a rally above \$0.18 on the March contract.
- > Natural gas As anticipated last month, the August key reversal bottom led to a strong uptrend in natural gas prices. The rally just

moved through the 38-per-cent retracement, as prices have improved by half a cent. We suggested that buyers do some pricing at the key reversal. We would hold the position with the intent of lifting it just below \$0.041 cents. > Crude Oil - Oil futures again shot up and tested contract highs just under \$115 on the December contract. Markets were concerned about not only the possible U.S. foray into Syri

- December contract. Markets were concerned about not only the possible U.S. foray into Syria, but also possible conflicts with Iran and Russia. However, the Russian proposal to control chemical weapons relieved the tension and oil dropped below \$110. Expect support around \$102. If it holds, it might be a good place to do some pricing, though it's likely to fall further if there are no additional sources of tension.
- > Canadian dollar The most recent rally is attributed to the withdrawal of a candidate for Chair of the U.S. Fed who was viewed as wanting to slow down the printing presses a little. Several currencies joined the loonie in the rally. A number of forecasters think our dollar will fall. We've been saying that commodity buyers should be covered below \$0.955 or on a rally toward \$0.98. This little rally carried December to \$0.97 that may be as close as it gets.

FOCUS on FOOD SAFET

Ron Wasik

Norovirus & the connection to foodborne illness

 he human norovirus is the leading cause of foodborne illnesses in North America, accounting for approximately 60 per cent of acute gastrointestinal illnesses involving vomiting and diarrhea. Much has been learned in recent vears about how norovirus is transmitted. and the effectiveness of some common approaches to limit its transmission.

Viruses were first discovered in 1892. Today we know that viruses outnumber all other living organisms on this planet. They only replicate within living cells of other organisms (hosts), and are normally host-specific, meaning that they usually infect a specific host species. However, it is well known that viruses can both mutate and "jump" species. Need I remind readers of ongoing swine and bird flu pandemic concerns?

Transmission & symptoms

Noroviruses can be transmitted directly from person to person and indirectly through the air and through contact with infected surfaces, food and water. It is believed that fewer than 10 virus particles can result in a full-blown infection in 24 to 48 hours after contact. Most of us are all too familiar with the symptoms, which include nausea, projectile vomiting, diarrhea, abdominal cramps, fever, lethargy, headaches and muscle aches. These symptoms normally pass in one to five days, but in rare cases infections may lead to Crohn's and other debilitating GI diseases.

Infected individuals unknowingly and

unavoidably spread their infections far and wide. Viruses spread through virusladen fecal and vomitus materials, and can remain viable for weeks on clothing, counter tops, walls, faucet handles, toilet seats and various other unsanitized dry and wet surfaces. Individuals who feel that they have recovered from their infection can shed viruses for days after symptoms disappear.

Significance to the food industry

Most norovirus outbreaks have been traced back to infected food handlers preparing minimally processed foods such as deli sandwiches and salads. Another frequent cause of outbreaks is infected individuals coming in contact with large groups of individuals in confined spaces such as airplanes and cruise ships, and institutions such as hospitals, retirement homes and prisons. Food processing plant cafeterias, washrooms and change rooms are also prime locations where noroviruses can spread rapidly and with disastrous consequences.

Recently published studies on norovirus transmission from humans to food and equipment indicate that these viruses are readily transferred by contact. Gloves appear to provide some protection, but it is limited. Food handlers should not only wear sanitary gloves, but also put on a fresh pair every two hours or less if they remain at their station. Workers who leave their station should wash their hands and don a new pair of gloves prior to returning.

Employers should stress to employees that it is both in the company's and the employee's best interests for people to stay home if they experience norovirus symptoms and/or if they come into contact with anyone exhibiting norovirus symptoms. Employees recovering from norovirus infections should be required to get a physician's certificate to confirm that it is safe for them to return to work.

Most of the research I came across pointed out that a number of chemicals commonly used in the food industry to sanitize food and equipment, such as ethanol, peroxyacetic acid, quaternary ammonium chloride and sodium hypochlorite, may not be effective or have little effect on norovirus. Anyone using these chemicals for the purpose of controlling norovirus should validate the effectiveness of their process.

Literature suggests that the most effective and reliable means of dealing with norovirus on equipment may be the use of standard cleaning practices involving a generous amount of hot water, soap and physical scrubbing, followed by rinsing with potable water. The jury appears to be out on what may be best practices for controlling norovirus on produce. If anyone knows of processes or chemicals that effectively control norovirus, please drop me an e-mail.

Raw milk cheese — Another sterile debate

n Sept. 18, 2013 the Canadian Food Inspection Agency confirmed that one person had died and several people in B.C. and Alberta were ill from eating E. coli contaminated raw milk cheese produced at a B.C. farm. As soon as the recall was announced, the media went into full frenzy and the usual "debate" about the safety of raw milk and raw milk cheese followed.

There is really no issue as to safety. There is a broad scientific consensus that raw milk is not as safe as milk that is pasteurized. There have been dozens of foodborne illness outbreaks in recent years with many hundreds of people seriously ill and some deaths clearly attributable to ingesting raw milk and raw milk cheese. That is why in Canada the sale of raw milk directly to consumers is prohibited by a variety of provincial provisions, and it is a crime to sell unpasteurized milk in Canada under B.08.002.2 (1) of the Food and Drug Regulations. Because raw milk cheese is less risky if it is given time to cure, our regulations allow for the sale of raw milk cheese as long as it is stored at 2°C or above for at least 60 days before being offered for sale.

The essential facts in this case are clear. The deadly bacteria came from cow poop. If the milk had been pasteurized, the bacteria would have been killed and the victims would be alive and well today. Raw milk cheese that is produced

by very reputable and careful cheese makers, as apparently was the situation here, still involves risk, as this case so clearly demonstrates.

Just because raw milk and raw milk cheese are not as safe as if they were pasteurized doesn't necessarily mean that they should be banned. That is why regulations around the world are so inconsistent. The sale of raw milk is illegal in Scotland, but legal in England,

There is a broad scientific consensus that raw milk is not as safe as milk that is pasteurized.

Wales and Northern Ireland (indeed, our future king will drink nothing else, a fact that could be used by both sides of the debate). South of the border, the states are roughly evenly divided; 28 states do not prohibit sales of raw milk, but they impose restrictions on suppliers.

While the food science on the safety risk of raw milk cheese is clear, the policy response can still be variable. We allow the sale of lots of other products that can be contaminated with *E. coli* without requiring pasteurization. If people think that the supposed benefit of raw milk

cheese outweighs the health risk, why shouldn't they be allowed to buy the product? And Health Canada's website does provide a clear warning: "Health Canada's ongoing advice to pregnant women, children, older adults and people with a weakened immune system is to avoid eating cheese made from raw milk, as it does present a higher risk of foodborne illness than pasteurized milk cheeses. If consumers are unsure whether a cheese is made of pasteurized milk, they should check the label or ask the retailer."

But there's the rub. There is no legal requirement to label raw milk cheese, and most retailers are uninformed. This is the debate we should be having.

I checked the cheese counter at my local grocery store today. Some cheeses bragged that they were made with raw milk, clearly appealing to the foodies willing to pay a lot of money for whatever benefit they think is obtained. I asked the clerk what other cheeses were made from raw milk and she had no idea. How could she? Several imported cheeses and many tiny portions labelled "local" and "artisanal" may well have been made with raw milk. The consumer who sets out to buy raw milk cheese for the taste, or some cultural or other ideological reason, is making an informed choice. For the rest of us, shouldn't we be entitled to know that some cheese is safer than others? Canada should require mandatory labelling of raw milk cheese.

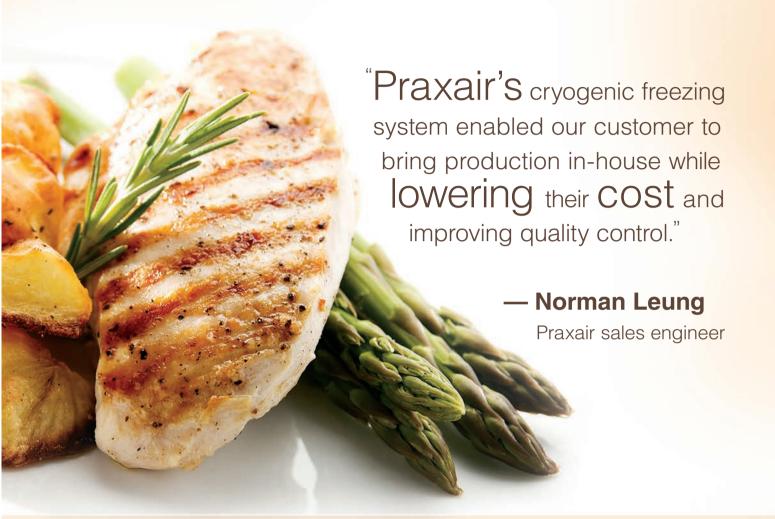

Ronald L. Doering, BA, LL.B., MA, LL.D., is a past president of the Canadian Food Inspection Agency. He is Counsel in the Ottawa offices of Gowlings. Contact him at Ronald.doering@gowlings.com

Standards of composition

ho decides what ketchup is, and what it must and may contain? Does it always have to be red? Who decides what foods require a standard of composition? Food standards exist in both federal and provincial regulations. There are administrative standards and voluntary standards, with the same standards existing in multiple sets of regulations. Prescriptive and codified, these standards are sometimes exhaustingly difficult to change. A whole set of regulatory tools was developed to manage them, like test market authorization, marketing authorization, temporary marketing authorization and ministerial exemptions.

Ketchup, while required to be made from red ripe tomato juice and sound trimmings, can in theory be greenish, as the standards provide for the addition of food colours. However, a graded ketchup, which as per the Processed Products Regulations (PPR) is subject to voluntary grades, has to be red because that is what the grade standard says.

Regardless of greenish or red ketchup, it has to be sold in standard container sizes according to the PPR. A ketchup standard also exists in the Food and Drug Regulations (FDR). Both use the term "catsup" but recognize similar variations like ketchup. Ketchup is such a simple product, but its regulation is complex.

Governments create standards to protect industry and consumers. It is only when changes are needed that issues emerge. Want to add tomato paste or honey to ketchup? That's not going to

happen without some regulatory effort, since the standards do not accommodate this. Over the years, interim measures have been used to temporarily manage change. As a result long-term change has been postponed for too long, resulting in unneeded efforts on the part of industry and government. When multiple regulations are involved, it becomes an even greater burden.

Both Health Canada and the Canadian Food Inspection Agency (CFIA) are in the midst of regulatory modernization. We know the CFIA will repeal many of its acts and their subordinate regulations, including the PPR. New regulations under the Safe Foods for Canadians Act (SFCA) will be created. The FDR, which also includes numerous food standards, is under Health Canada's authority and will not be repealed. The CFIA has little appetite for major house cleaning of food standards since it has filled its plate from the buffet of other regulatory modernization efforts. To repeal regulations and their standards only to resurrect them under new regulations would seem pointless.

A more practical solution might be to employ the incorporation by reference provision in the SFCA to set up food standards in a separate technical document that can be modified outside the normal fold of making and amending regulations. If that were to happen it would then make sense that Health Canada repeal food standards in the FDR that have nothing

to do with food

safety or nutritional considerations, and that are covered under other standards anvwav.

Federal food standards of composition that are commerce related, rather than related to safety, have limited applicability in intra-provincial trade. They do apply to import, export and interprovincial trade. The PPR does not apply to foods sold only within a province. The regulations under the SFCA will not apply to intra-provincial foods either. Nor do the trade and commerce standards in the FDR apply. Thus, a shift to move standards out of the regulations but incorporate them by reference would seem like a logical option. One issue with the possible repeal of food standards in the FDR is that those regulations differentiate the use of food additives between unstandardized and standardized foods, as defined in the FDR. That might take a bit of thinking, but it can be achieved relatively seamlessly.

We are exhausting a great deal of effort to modernize our food regulations.

> A bit of focus on food standards now, while that transition is being made, might save some grief down the road. The next time you wait for the ketchup to pour out of the bottle would be a good time to reflect on how artificially complicated we have made our food regulations.

Product Quality Performance Nutritional Value

Natural Solutions!

Dealers Ingredients offers you the knowledge, expertise and experience to deliver product performance solutions - naturally. Since 1976, Dealers Ingredients has supplied quality ingredients to leading food manufacturers and processors across Canada. We specialize in supplying natural source ingredients that improve the quality and value of your products. We have a world of technical knowledge that can help you solve complex problems with answers to questions about your specific products.

Dealers Ingredients

Suprasel OneGrain is a simple 1-to-1 replacement so no change in recipes are needed. The greattasting, free flowing Suprasel OneGrain product can be handled and stored just like regular salt, making them a convenient replacement in food manufacturing.

Flavourful, heart healthy, dairy concentrates - Butter Buds. Made from real butter, creams, milks, cocoa butter and cheeses. Providing natural dairy richness, fatty flavour notes and improved mouth feel. FIBERSTAR

Product of the USA

Citri-fi from Fiberstar is an innovative Ingredient tailored to deliver dramatic product performance benefits. It has the ability to both maintain or improve taste, texture, mouthfeel and volume while lowering finished product costs.

When it comes to optimizing your production line, we've got the solution.

Vemag Stuffers

- Available with either double-screw or vane pump technology
- Optional in-line grinder and twist linking with sizing for superior looking product
- Portioning accuracy
- A variety of specialized attachments available for optimal versatility

Holac Dicers

- Cube, strip, slice and flake
- Ideal for fresh and cooked meats, cheese, fish and pizza toppings
- Automatic pre-press system ensures absolute cube uniformity for fresh meat
- Easily changed cutting grids for sizes from 1/8" to 2-1/4"
- Production rates of 500 10,000 lbs. per hour

AMFEC Processing

- A full line of tumblers, massagers, mixers, blenders, vacuum stuffers and dumpers
- Wide range of capacities to fit all production requirements
- Heavy-duty, durable construction

Fomaco Injectors

- A new generation of injectors for boneless and bone-in products
- Self-cleaning pressure filter eliminates clogged needles
- Adjustable pneumatic stripper system to control pressure on product
- Control of brine flow in both down and up stroke

Seydelmann Cutters and **Grinders**

- A full line of heavy-duty, high speed cutters and vacuum/cooking cutters
- Models for all types of products and production requirements
- Comprehensive range of heavy-duty grinders

Vemag Smokehouses

- A combined hot smoking and cooking system
- Redding, drying, smoking and cooking cycles completely controlled
- Unique air circulation system with two sets of injection ducts and one return duct ensures uniform temperatures and air flow
- System ensures a uniformly cooked product with constant core temperatures and standardized smoked color

Ross Tray Packaging

- Industry choice for case-ready packaging of whole muscle and around product
- Machines available for production of 10 - 150 packages per minute
- High-impact seal bar system ensures the highest quality seals
 - All models include lane control, tray carrier system, toggle locking die box, and totally enclosed vacuum/gas flush chamber

Reiser Form/Fill/Seal

- Durable and reliable form/fill/seal packaging machines for flexible, semi-rigid, vacuum and modified atmosphere packages
- Complete range of skin packaging machines for exceptional presentation of product
- All models feature two 4-point lifting stations, which can generate up to five metric tons of closing pressure for reliable sealing and more uniform forming

Supervac Vacuum Packaging

- Full range of automatic belt vacuum chamber packaging machines
- Designed for single-operator use to greatly reduce labor costs
- Double biactive sealing virtually eliminates leakers
- Patented expansion cushion increases output through shorter evacuation times
- Range of shrink tanks available

Fabbri Stretch Wrapping

- Automatic wrapping machine uses stretch film to package fresh food in preformed trays
- Operator-friendly controls for simple operation and self-diagnostics
- Up to 99 package tray lookups
- Unique open design allows easy access for faster film reel change, cleaning and maintenance
- High-speed machines available with models for up to 62 packs per minute

PACKAGING Report

GFSI RECOGNITION IS ESSENTIAL TO THE PACKAGING INDUSTRY

or the past decade, the global food processing industry has developed standards to meet the requirements of the Global Food Safety Initiative (GFSI). It is now time for the suppliers of food packaging to step up to the plate.

It is worth noting that in North America, as in Europe, almost every major food retailer and food processor are requiring that their packaging suppliers implement a standard recognized by the GFSI. It's all about providing a process for due diligence when it comes to food safety, requiring firms to demonstrate that they have a GFSI-recognized standard in place governing packaging materials.

While GFSI requirements were initially started in Europe for food processors about 13 years ago, they have now spread to the rest of the world, initially in the form of standards for food production. They are now being required for packaging materials.

North American firms requiring GFSI recognition

The following is a partial list of firms requiring GFSI recognition. It includes Nestlé, Coca-Cola, PepsiCo, Kraft, ConAgra Foods, Yum Brands, Kroger, Wegmans, Loblaw, Publix, Sobeys, Walmart, Costco, Cargill and McDonalds.

We, in the packaging industry, strongly support the GFSI vision to drive continuous improvement in food safety to strengthen consumer confidence worldwide. We support its objectives of reducing food safety risks by delivering "equivalence and convergence" between effective food safety management systems; managing costs by eliminating redundancy and improving operational efficiency; developing competencies and capacity building in food safety; and providing a unique international stakeholder platform for collaboration, knowledge exchange and networking.

Of note, PAC — The Packaging Association served on the GFSI steering committee in developing requirements for GFSI recognition of HACCPbased food standards for packaging.

GFSI recognition for IFS PACsecure packaging standard

I expect that GFSI benchmarking and recognition of the IFS PACsecure food safety standard for individual packaging materials will be completed by the end of November. It was developed by PAC in conjunction with International Featured Standards (IFS), one of the largest food safety and quality standards organizations in the world.

For its part, PAC is a leading North American packaging community association with a base of more than 375 corporate and 2,000 associate members. IFS PACsecure was created by PAC through a 100-plus member steering committee to provide packaging manufacturers with the ability to certify primary and secondary packaging materials for the food industry.

44 We, in the packaging industry, strongly support the GFSI vision to drive continuous improvement in food safety to strengthen consumer confidence worldwide.

PACKAGING Report

The IFS organization has more than 13,000 certifications for its GFSI food safety standard. In addition to packaging, it manages standards governing logistics, brokers, cash and carry/wholesale, and household and personal care goods. IFS is headquartered in Berlin, Germany, but maintains offices around

the world to form a network of global support for companies certified to its standards.

Comprehensive standard

We firmly believe IFS PACsecure is the most comprehensive food safety standard for individual packaging materials anywhere in the world. It is based on

HACCP for individual packaging materials covering the 24 common manufacturing processes required for paper, flexible plastics, rigid plastics, metals and glass. It is supported by easy-to-use workbooks for each of the 24 manufacturing processes.

To date, there have been more than 1,700 downloads of the IFS PACsecure standard worldwide, including in the U.S., Canada, Chile, Italy, Germany, France, Portugal, Mexico, Brazil, Japan, Argentina, and the U.K. It includes large and small companies such as Unilever, Coca-Cola, TetraPak, General Mills, Mars, U.S. Foods, various certification bodies, and many more.

North American firms certified to IFS PACsecure

Among North American firms third-party certified to IFS PACsecure are Silgan Plastics, Exopack, Atlantic Packaging, Farnell Packaging, Haremar, Jones Packaging, Layfield Poly Films, Master Packaging and Maritime Paper. In Europe, firms certified to IFS PACsecure include Mondi, M. Neemann and Supralon.

Over the next year, we will also be holding numerous training sessions throughout the U.S. and Canada to help packaging converters become familiar with the IFS PACsecure standard. More than 70 North American packaging firms recently completed their training and are soon expected to be audited to the standard.

James Downham is president and CEO of The Packaging Association. For more information on IFS PACsecure, contact Larry Dworkin, IFS PACsecure director, at larry-wdworkin@gmail.com, or at (416) 645-3282. Or contact George Gansner, director of Marketing, IFS Management, at gansner@ifs-certification.com or at (314) 686-4610.

Proud Canadian Distributor of Quality Ingredients from:

As increasing numbers of North American consumers cut gluten out of their diets, the demand for gluten-free foods is growing by leaps and bounds

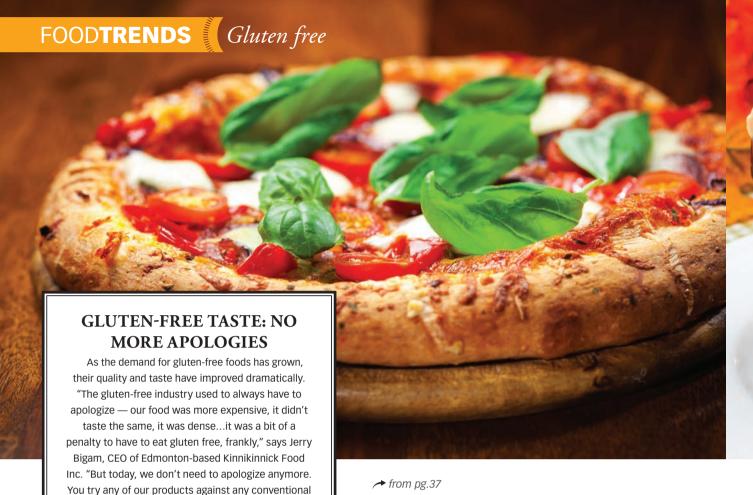

hen Jerry Bigam first joined Kinnikinnick Foods Inc. in 1997, the customer base for the Edmonton-based, gluten-free food company was naturally quite small. Back then only people with celiac disease — an autoimmune disorder in which eating gluten (a protein found in wheat and other grains) causes severe intestinal damage — bought gluten-free products. And according to the Canadian Celiac Association, it's estimated that one in 133 people suffer from the condition. "When I first started [at Kinnikinnick] we only had five people in the operation, which included a retail store and a small production facility. It was very tiny," says Bigam, now CEO of the company. In the 1990s, Kinnikinnick's product line was fairly limited, comprising a few different breads, English muffins and a couple varieties of cookies.

Fast-forward to 2013: Kinnikinnick now has a staff of more than 200 people, two production plants that add up to 150,000 sq. ft. of space, and a dedicated research and development centre. The strictly gluten-free company now sells more than 50 different products, including pizza crusts, muffins, doughnuts, cake mixes

IT'S ESTIMATED THAT THE GLOBAL GLUTEN-FREE MARKET WILL REACH **US\$6.2 BILLION BY 2018.**

from pg.37

and much more, and the company's wares can be found at almost every mainstream grocery store across the country. While much of this phenomenal growth can be attributed to Bigam's smart business acumen — for instance, he jumped on the e-commerce bandwagon early on and successfully started selling food to celiacs across North America via the Internet in 1998 — the fact that non-celiacs have started adopting a gluten-free diet in recent years certainly hasn't hurt in terms of growing the company's clientele.

"When we started in the 1990s, [our customer base] was completely celiacs, but then we began getting requests from people with autistic children in the early 2000s," says Bigam. Although the science isn't conclusive on this, countless parents of children with autism and ADHD are indeed reporting improvements in their children's conditions when they cut out gluten. At the same time, an increasing number of adults have been discovering that they have "gluten intolerance" or "gluten sensitivity," which means that while they don't have celiac disease, eating gluten still causes them abdominal discomfort. On top of that, many people now simply report that they generally "feel better" when eliminating gluten, while others believe cutting out gluten has helped them lose weight. Add to that the influence of celebrities such as Gwyneth Paltrow and Victoria Beckham touting the benefits of eating gluten free, and you get a dietary trend that's become firmly established throughout North America.

A 2013 report by Rockville, Md.-based Packaged Facts, called Gluten-Free Foods in Canada, shows that the gluten-free food market grew from US\$178.9 million in 2008 to more than US\$450 million

product and I don't care who they are, we're going to come up, many times, better than the conventional

product." Bigam readily concedes that the quality

of his company's products has improved immensely

in the last two years, primarily due to recent

investments into a new product development lab.

good, and as close to our regular mixes as possible,"

says Tom Wauchope, who does marketing for

Brampton, Ont.-based Embassy Flavours, makers

of bakery ingredients, including gluten-free bakery

mixes. That said, Wauchope notes that it's not just a

matter of removing the gluten and tweaking existing

recipes — completely new recipes must be devised.

"The smallest little change will have a drastically

different effect, so we have to start from the

bottom up. It's a science," he stresses. Similarly, Loblaw Companies Ltd. created all new

products for its President's Choice gluten-free line

rather than simply tweaking existing recipes, and

they're placing an extremely high priority on taste

and quality. "We won't create a product unless we

can create, in the case of gluten free, a product that

is at least as good as a non-gluten-free product, if not

better," says Cheryl Grishkewich, vice-president of

Control Brand Marketing for Loblaw.

"Our number-1 priority is that items taste really

THE GLUTEN-FREE FOOD MARKET GREW FROM US\$178.9 MILLION IN 2008 TO MORE THAN **US\$450 MILLION IN 2012**

in 2012 — a compound annual growth rate of 26.6 per cent between 2008 and 2012. And the NPD Group reported in May that interest in gluten- and wheat-free items in Canadian restaurants has been growing steadily since 2010, having increased 137 per cent in the past three years. "There is a very real demand for these options, particularly in the restaurant industry," says Robert Carter, executive director of Foodservice at the NPD Group.

This growing demand has, in fact, led a number of traditional food companies to wade into the gluten-free market. Brampton, Ont.-based Embassy Flavours, which specializes in customized bakery ingredients, began seriously researching the gluten-free market two years ago, and recently launched a number of glutenfree bakery item mixes for its bakery clients. Products include cake mixes, muffin mixes, and mixes for various breads, brownies, cookies and pizza crusts.

Grocery giant Loblaw Companies Ltd. has also created a line of gluten-free products for its President's Choice (PC) privatelabel brand. Launching in the fall of 2012 with eight glutenfree bakery products, PC has since added nine more gluten-free

grocery products to its lineup, with the promise of more to come in late 2013 and early 2014. Current products include a variety of pastas, cake mixes, crackers, muffins, cookies, breads and snack loaves. "Our corporate goal is to contribute to Canadians living life well, and being able to offer food that helps them to live life well and to meet special dietary needs is important to us," explains Cheryl Grishkewich, vice-president of Control Brand Marketing for Loblaw Companies Ltd. The best-selling glutenfree PC products at the moment are their mini brownies and white sliced sandwich loaf.

According to the Packaged Facts report, the snack category was Canada's largest gluten-free category (accounting for US\$127.1 million or 27.7 per cent) in 2012, followed by breads/cereals/ grains (at 24.8 per cent) and frozen/refrigerated prepared foods (at 20.5 per cent). The same report projects continued growth for the gluten-free market in Canada over the next several years. Although the growth rate is projected to slow to the single digits in 2016, retail sales are still expected to reach US\$549.8 million in 2013 and US\$811.5 million in 2017, a compound annual growth rate of 10.2 per cent between 2013 and 2017. And this isn't just a North American trend, it's happening worldwide -MarketsandMarkets, a U.S.-based global market research and consulting company, estimated earlier this year that the global gluten-free market will reach US\$6.2 billion by 2018.

Tom Wauchope, who does marketing for Embassy Flavours, says his company did extensive research before entering the gluten-free market, and everything they learned led them to the strong conclusion that gluten free was a good place to be. "We anticipate that the growth will continue," he says. "We don't think it's just a fad."

You get the picture. When it comes to packaging automation, Unisource understands that operations must run consistently day-after-day in order to keep productivity, performance and quality to the highest standards.

Hunger for growth

A new benchmarking study on growth in the global food and beverage industry offers optimism for manufacturers

BY JIM MENZIES

ood and beverage companies around the world are now poised for growth. With recoveries well underway in the U.S., Japan, the U.K. and the Euro Zone, producers are once again investing in new markets, new products and new capacity. These findings, along with a number of other industry trends, are highlighted in Grant Thornton LLP's recently released international food and beverage benchmarking study A Hunger for Growth: Food and beverage looks to the future.

The study comprised approximately 250 companies worldwide, with particular focus on North America, Europe and Australia/New Zealand. As you can imagine, with such an extensive study, there are numerous trends, issues and conclusions arising. When it gets right down to it, however, there are a few key messages to share.

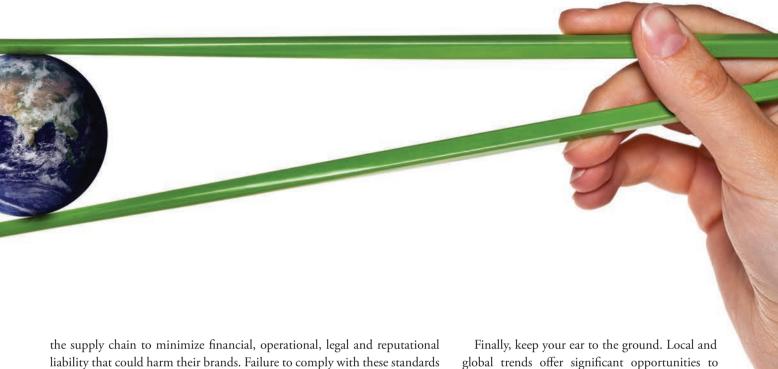

The theme of growth was evident throughout the study. There is no question that producers around the world are optimistic. The vast majority, in all sectors of the industry, expects revenues and profits to increase this year; many are expecting double-digit growth. In addition, a significant portion expects employment in the industry to increase as well. With rapid advancement in logistics and technology, more and more producers believe they can meet customer demand almost anywhere. Although China and Southeast Asia are viewed as prime

target markets for growth, many producers believe that significant growth opportunities exist in North America and Europe as well.

It was also clearly evident that producers believe they need to do their homework before embarking on these export strategies — meeting with local retailers, becoming aware of local regulations, gathering intelligence on local competitors and understanding tax compliance and planning opportunities were all identified as critical to successful export expansion.

Emerging trends also create significant growth opportunities. Producers must stay abreast of shifting consumer tastes, such as the trend towards healthier eating, or in some countries, the trend towards premium luxury products. Companies with agility, which are able to exploit these trends in the early stages with innovative new products, often profit most. Although larger companies might not be as agile, they are also able to exploit their networks and size to develop new products, leverage their established distribution channels and acquire other companies which may be further advanced in satisfying a particular trend. Regardless of size or agility, having the intelligence to recognize the trend, and the foresight to take advantage of it, are key.

While there is definitely an air of optimism, the study also highlighted some accompanying concerns. In particular, many producers worry about rising costs, ever-increasing regulations, and supply-chain vulnerabilities. Almost two-thirds of the respondents indicated that they believe labour, transportation and materials costs will all continue to rise this year. Higher commodity prices are of particular concern, since materials typically comprise almost half of the cost of the end product. And with stringent food safety and supply chain traceability standards now in place around the world, navigating through the industry's regulatory environment has become quite complex and costly. Producers in most parts of the world must now track their ingredients from farm to table, collaborating with partners throughout

can lead not only to regulatory sanctions, but also to major ramifications if tainted products reach the market. Interestingly, some of the more progressive producers actually view these regulations as opportunities to differentiate themselves by highlighting quality in their products, practices and supply chains.

So, what should the results of the study mean to you? First, ensure that you have a growth strategy. Determine if you want to expand your existing operations internally or through mergers and acquisitions. If expanding existing operations, do you know which plants, which machinery and which technology? If you go down the M&A path, then conducting proper due diligence on your target companies and their markets is essential. In either case, you also need to make sure you can finance the expansion, so start laying the groundwork with your lenders today.

Second, innovate. Consumers want new products, improved quality and lower prices. Retailers want products that pull consumers into their stores and move products off their shelves, and concentrated power among retailers is here to stay. Strengthening your offerings to them gives you much more leverage should they try to become uncompromising.

Third, be aware of government regulation and assistance programs. With the increasingly complex worldwide regulatory environment, you must be able to monitor, measure and document your compliance with these regulations at home and abroad. In addition, make yourself aware, in whatever country you decide to operate in, of the government programs available to help you. Whether it's tax-free zones, R&D incentives or the like, many good government programs exist and are available to help support your growth in their respective markets.

grow. Stay current with these trends, evaluate which ones offer the greatest opportunity to you, and ensure you are in a position to take advantage of them when they arise.

To us, the most compelling message from the study is that food producers around the world are optimistic and excited. After years of uncertainty, retrenchment and delayed investments, the industry is in expansion mode once again. As a professional services firm, we are very proud to be able to serve companies in such a dynamic industry, and look forward to helping our clients satisfy their "hunger for growth."

...... Jim Menzies, CA, is Global Food and Beverage industry leader for Grant Thornton LLP. For more information or to read the study in its entirety, visit www.Grant Thornton.ca/manufacturing

Antimicrobial Packaging: delivering safe, high-quality food

reater demand for fresh, natural products, and the globalization of markets that require longer distribution distances, are now driving the development of innovative packaging. For example, active packaging is an emerging technology that changes the condition of packaged food to extend shelf life and improve food safety or sensory properties of the packaged food. So how does it work? Antimicrobial packaging, a form of active packaging, releases compounds ("active agents") to reduce, inhibit or slow the growth of microorganisms. The use of these active agents thereby maintains food quality and reduces the need for preservatives and additives.

Active agents can be incorporated into packaging material, coated/adsorbed onto packaging surfaces, or placed within elements such as sachets, pads or labels. Antimicrobial systems can work by direct contact with the food surface, or they can control migration of non-volatile agents or emission of volatile compounds into the headspace atmosphere surrounding the food. Different types of delivery systems and packaging materials are combined to maximize the efficacy of antimicrobial properties.

Types of antimicrobial agents

» Ethanol slows mould growth and improves shelf life of bakery products.

In Japan, there are several commercially available ethanol vapour-generating sachets activated by moisture (such as Ethicap and Negamold).

- » Allyl isothiocyanate is a strong antimicrobial compound extracted from mustard and horseradish (wasabi) and is released into the package headspace upon exposure to high moisture from the food (for example, cakes, breads and ready-to-eat meals). It is incorporated into label film and is commercially available in Japan in brands such as Wasaouro.
- » Sulphur dioxide releasing packaging is used to preserve grapes from mould development, and is released from reaction with moisture.
- » Carbon dioxide has bacteriostatic effects for products such as meat, fish, poultry and prepared dishes. The presence of oxygen absorbers inhibits aerobic microbial growth. Commercial examples are AGELESS GT and FreshPax.
- Silver ions have demonstrated strong antimicrobial effects on a wide range of microorganisms. Agion is a silver-based material that has been incorporated into cheese coatings to inhibit the growth of mould and bacteria in the rind.
- » Chlorine dioxide is released from a label (such as Avery Dennison) into the package headspace when exposed to moisture.

» Titanium dioxide powder-coated packaging film has been shown to reduce E. coli contamination of food surfaces, which suggests that films could also be used for fresh produce.

Active packaging is successfully being used in the U.S., Japan and Australia, but is limited in other countries, including Canada. The food industry is reluctant to embrace active packaging due to legislative restriction, lack of knowledge about consumer acceptance, uncertain efficacy of systems, and unclear economic and environmental impact.

To help address these concerns, migration of substances and breakdown of products should be considered, as well as effective prevention of microbial growth without inducing antimicrobial resistance or pathogen overgrowth. Use of plant extracts and oils with known antimicrobial properties are generally recognized as safe, but the concentration may need to be higher to be effective. However, these higher concentration levels may be of regulatory concern and can also affect the sensorial properties of the food.

Future work will focus on antimicrobial compounds that are bound onto the polymer. This would avoid detachment from the packaging material to maintain antimicrobial properties and avoid regulatory hurdles related to migration of chemicals into food. Research continues to develop compounds with a wide range of antimicrobial activities, efficacy and low toxicity, so that we can keep our favourite foods fresher longer.

Carol Zweep is manager of Packaging and Food Labelling Services for NSF-GFTC. Contact her at czweep@nsf.org

Low-sodium option

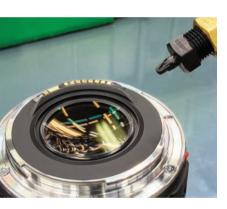

Salt of the Earth introduces a new low-sodium sea salt supplemented with fruit and vegetable essences called WonderSalt. The multicoloured sea salt is made with a proprietary mix of sodium and potassium, and

is enriched with extracts such as radish, carrot, apple and lemon, which provide nutrients as well as colour. The line contains only 50 per cent of the sodium of common salt, but with the same flavour. www.salt.co.il

Tinv nozzle

The PEEK Atto Super Air Nozzle from Exair Corp.

offers the highest performance attainable from a tiny nozzle, with the smallest, most precise blowoff and an efficient, high-volume, high-velocity airflow. The air nozzle is just 0.50 in. (12.7 mm) with a diameter of 0.16 in. (four millimetres), allowing it to be installed in tight spaces. Constructed of non-marring plastic, the air nozzle is suitable for blowoff, cooling and drying applications. It is also available in Type 316 stainless steel and with NPT threading. www.exair.com

Lighted fan

The Big Ass Fan Company has launched the world's first LED-equipped industrial ceiling fan, the Powerfoil X LED. The new unit uses less than 175 W, but delivers as much light as a 400-W metal halide, and covers the entire diameter of the fan. The fan itself is durable, quiet and effective, generating huge volumes

of gentle air movement using one- or two-horse-

and light large areas, while eliminating the need to rearrange lighting grids to avoid a shadowing effect.

www.bigassfans.com

Chocolate taste, less fat

ADM Cocoa has launched a new deZaan reduced-fat cocoa powder with only 0.5 per cent fat. D-00-ZR retains the same chocolaty taste of deZaan ZR cocoa powders and bright chocolate colour, making it perfect for low-calorie products with lower saturated fat contents. D-00-ZR can also enhance the quality of formulations where fat can have a negative effect, such as in protein foam-based confectionery and bakery products. www.adm.com

Spirited flavours

Chefs know that a splash of alcohol can heighten the taste profile of foods. Now, energized, "spirited" flavours from Comax Flavors can offer a unique twist to a range of standard food and beverage products, from baked goods to ready-to-drink beverages. Comax offers well-known alcohol flavours such as Amaretto, beer, tequila, Champagne, Cognac, red and white wine, rum and Grand Marnier.

www.comaxflavors.com

Authentic taste

Chr. Hansen has launched SoGreek, with original culture isolated from artisanal yogurt from Crete, for the production of authentic yet modern mild high-protein yogurt. The new cultures, SoGreek YoFlex and nu-trish, are for both fortified and strained yogurt, and are also available with the company's probiotic BB-12. The cultures can produce yogurts that are authentic and artisanal, with high probiotic cell counts, high protein, low fat and medium sugar, delicious taste and smooth texture.

www.chr-hansen.com

High resolution

The IRTracer-100 Fourier Transform Infrared spectrophotometer from Shimadzu Scientific Instruments Inc. combines high speed, sensitivity and resolution with enhanced expandability and easy-to-use software to quickly obtain data for ultra-small contaminants. With a resolution of 0.25 cm-1, the unit is an accurate, quick way to quantify and identify samples, while its rapid scan function allows rapid sample acquisitions of 20 spectra per second. The unit can also be customized with a variety of software and hardware options.

www.ssi.shimadzu.com

Whether you are developing a new product or reformulating an existing one, GPC's knowledge of maltodextrin for applications such as nutritional bars and beverages can make your process a breeze. GPC maltodextrins are designed for quick dispersion, easily dissolving in cold water with minimal sweetness and a clean flavor profile. Keep your next project from becoming a marathon.

Call GPC and let us know how we can help.

Our Canadian Representative: CCC Ingredients • www.ccc-group.com

HOW TO USE THIS GUIDE • The Food in Canada Buyers' Guide is based on an alphabetical/numerical system. Our guide contains seven sections. Please consult the contents page for the section you're looking for (e.g. spices). Look up the item you need alphabetically and a company list will appear underneath the item. If there are multiple choices, such as flour (whole wheat, rice or gluten free, etc.) a numerical rating will advise on which choices each supplier carries. Look up the suppliers' contact information in the alphabetical listing beginning on page 102.

Ingredients & Additives

This section includes preservatives, fruits, flavours, mixes, flours, chemicals and spices. For complete contact information on companies listed in the following section, see Suppliers' Information at the end of this guide.

THERE ARE

100 good reasons

TO USE THIS SYMBOL -

HERE IS JUST ONE

From Here

"People are happy when they learn that our milk comes from a nearby farm. When I put the 100% Canadian Milk symbol on my cheese packaging, I guarantee that it is made with milk from Canadian farms."

Fresh Ideas Start Here

The Wright Group

Unparalleled access to industry data.

Innovative ingredients from the world's premier manufacturers.

Comprehensive strategies to help you bring successful products to the market.

Texture Enhancement: With the family of METHOCEL™ and Clear+Stable™ Cellulose based food ingredients from Dow Pharma & Food Solutions, we are making sure our customers' products look great and have the right texture when they reach the consumer's kitchen table. METHOCEL" offers unique properties, like reversible thermal gelation, that firms when heated and softens when cooled. The secret ingredient to exceptional products that have unsurpassed boil out control, superior binding, and stable uniform entrainment of air, no matter the application.

Healthy Enhancement: With a dash of savvy, innovative Wellence™ food ingredients, and our formulation expertise, we are making healthier and more satisfying reduced-fat and allergen-free foods. This includes gluten-free foods, that don't compromise on taste, look or feel.

Great Tasting, convenient heart health

Access the Benefits of CoroWise[™] Plant Sterols.

Would you like to help Canadian consumers lower their cholesterol while still enjoying many of the foods and beverages they eat every day? Now you can. Health Canada cleared the way for the use of CoroWiseTM plant sterols in food products sold in Canada, through a Novel Foods Approval.

What are plant sterols?

- They are a natural extract present in most fruits and vegetables.
 - They can be added to foods and beverages without affecting flavor or texture.
- They can help foods and beverages be eligible for health claim labeling.

Because one in three deaths in Canada is due to heart disease and stroke, reducing cholesterol is more important than ever. Now you can help ensure Canadian consumers have access to the healthy benefits of plant sterols.

For more information about CoroWise™ plant sterols, contact Diane Berthiaume, Senior Sales Manager, at 1-647-299-3226, or Diane_Berthiaume@cargill.com

fou Often ind Us on

Our gelatin products have

numerous and varied applications in

the Food, Health and Nutritional Industries.

As a natural and fat free ingredient that is

both high in protein and

virtually calorie free,

gelatin is an invaluable ingredient in

many food products.

INVEST IN THE HEALTH OF YOUR BUSINESS.

Investing in healthier oils is good for the health of your business. Omega-9 Oils are high in heart-healthy monounsaturated fat and have the lowest saturated fat among cooking oils.

This unique oil profile delivers longer fry life, increased shelf life and a light, clean taste. With superior health and performance attributes, Omega-9 Oils are healthier oils for a healthier business.

COMING IN THE Jan/Feb issue Celebrate success in 2014!

Our 3rd annual Canadian Food Industry Leadership Awards are coming in the Jan/Feb issue. Step up and salute the best of 2013/2014 as we feature some of Canada's leading food and beverage companies.

PLUS

- > The bake and snack food sector report
 - > Food trends: Pasta & noodles
 - > 2014 Guidebook
 - > Product showcase: IBIE 2013
- > Research Chefs in Canada, including pre-show coverage of the RCA Conference, March 11 - 14 in Portland, Oregon

Make sure you don't miss this issue!

Processing Machinery, Equipment & Services

This section includes production, cooking and refrigeration machinery. For complete contact information on companies listed in the following section, see Suppliers' Information at the end of this guide.

HANDTMANN CANADAOBC	

E-Color™ is a complete range of high performing color additives that is extracted and isolated from natural origins to ensure

exact color targets are achieved. VegeBrite™ gives a comprehensive, vibrant palette of brilliant shades made exclusively from concentrates of fruits and vegetables, edible flowers and algae. Obtained without selective extraction or isolation, these ingredients perform superbly in a wide range of applications. For the best natural colors, contact our team of experts today.

Continuous Production

No casing changes

Perfect for many products including fresh sausage links and dry cured or semi-dry snack stick production

New Generation Processing

The calcium chloride bath quick-sets the gel into a vegetable casing, giving you the flexibility to form, cut or hang your product.

Handtmann Reliability And Quality, Guaranteed!

Call today for your free calculation to compute your payback against ConPro payback averages of 6 to 12 months!
